

The purpose of Spring Road Restrictions is to protect Manitoba's surfaced pavements from undue damage by reducing allowable axle weights during the spring thawing season. In consultation with those affected by these weight reductions, Manitoba Infrastructure periodically revises its policies and procedures to reflect the current transportation trends, industry needs and weather patterns. Up to date policies and procedures help industry improve trip planning while minimizing the impact of loads to the weak pavement structures when they are at their most vulnerable conditions.

2019 spring road restrictions will start on March 20 in Zone 1A and Zone1B.

2019 spring road restrictions will start on March 21 in Zone 2.

2019 spring road restrictions will not start before March 22 in Zone 3.

General guidelines to Spring Road Restrictions can be viewed on the Manitoba Government website.
